

Drawing people into nature

# ADVENTURE PARKS

Construction and design of  
adventure parks and rope courses

## Captivating adventure parks

Balancing, tottering, swinging, sometimes zipping through the air and sometimes carefully and slowly feeling one's way; this is how one climbs here, high up in the forest.

Adventure parks are high-rope courses used for tourists and built in an existing, natural forest.

Climbing through the trees and surpassing oneself in the process - this is what constitutes the unique appeal of adventure parks. Up there, the thrill of the height and the challenges of the course meet encounter an unadulterated experience of nature. During their climbing tour, customers can enter parts of the forest that can't be reached in any other way - the trees' canopies.

CLIMBING

# The joy of movement nature as a motivator

All age groups, right down to the smallest children will enjoy themselves and the experience of nature.

## **Ropes course**

After a short introduction to gear and safety, guests can move freely through the ropes course. Using the forest as a playground area, nature demonstrates what it has on offer. Based on Cambium's longstanding experience the elements are graded by their degree of difficulty and installed to slowly luring the guests out of their comfort zone.

## **Zipline course**

A fast-paced race through the forest. Cambium GmbH combines the joy of experiencing nature with fun and action. The in-house-developed zipline curve makes for thrilling surprises behind the trees. The traffic light system, another Cambium in-house development, cares for the safety of your guests.

## **Partner course**

Get your team-skills tested in the partner course. The challenges of these elements can only be tackled by cooperating and supporting one another.

## **Children course**

Climbing, moving hand over hand, ropeway travel ... just like the adults high up. This is made possible by a low-altitude course, assembled at a height of 1.50m, which can be climbed both with and without a security system.

## **Treewalk**

Getting high up on broad suspension bridges that do not require a security system. An experience of nature for all age groups. No matter, if built as an expansion of a climbing forest or as a standalone, our treewalk will be your customer magnet.

## Design of rope courses

Are you looking for an additional attraction in the touristic or experiential-education sector?

The construction of a rope course or an adventure park is a moderate investment that is flexible in size and can, due to its relatively low fixed costs, yield high returns.

Everything is possible. This also applies to the project implementation: As one of the leading manufacturers in the field Cambium has many years of experience in the design, planning, supervision, construction and inspection of adventure parks and rope courses. Get in touch with us and we will create a detailed project drawing and will guide you through all issuing processes with authorities.

What is more, we appreciate diverse modes of cooperation: we supply construction sets and offer DIY-customers varying levels of support.

**Contact us. We will gladly consult with you.**

### **Cambium GmbH ...**

- offers products that blend in seamlessly in the natural environment. Cambium is committed to quality and sustainability in material and implementation.
- works with an assembly technique based on a unique concept for assembling steel ropes and platforms that is gentle on the trees.
- assembles without heavy construction machines or lifting platforms, hence protecting the living forest.
- offers a variety of different belay systems, from smart belays right up to a Continuous Belay System.
- offers sophisticated courses / products / installations, right down to the smallest components and constantly optimised day-to-day operations gained from the experience of existing parks.

### **Prerequisites**

- starting from 150 m<sup>2</sup> with approx. 20 trees, it is suited, e.g. for a children's course - with approx. 1.5ha, large adventure parks can be realised.
- Trees with a diameter of > 25 cm

# Our satisfied customers

We are delighted to have realized a large number of successful projects with our customers and been able to build relationships based on trust and mutual cooperation. Customer satisfaction is paramount and spurs our motivation for new developments and projects. Some examples of our references:

## Freiraum group of companies

Sayn climbing forest, Hennef Vulkanpark Schwerte climbing forest belongs to the Freiraum company group.

### Sayn climbing forest

The Sayn climbing forest is located in the beautiful Sayntal near Koblenz. The facility, which was constructed in spring 2008, captivates with its tree population. Among others, it boasts Germany's third-highest tree, in addition to many creative elements such as a tree house and slide.  
[www.kletterwald-sayn.de](http://www.kletterwald-sayn.de)

### Hennef climbing forest

Since June 2011, there have been 14 courses to climb in the Hennef climbing forest. The partner course is considered a special challenge, which can only be managed with by helping one another.  
[www.kletterwald-hennef.de](http://www.kletterwald-hennef.de)

## Weitblick experience of nature

### Wiesbaden Neroberg

In a beautiful oak forest, a climbing forest was erected in 2006, converted in 2016 and expanded with Continuous Belay and Fox Corner.  
[www.kletterwald-neroberg.de](http://www.kletterwald-neroberg.de)

### Darmstadt

A climbing forest was erected at the university premises in 2007 and subsequently expanded many times.  
[www.kletterwald-darmstadt.de](http://www.kletterwald-darmstadt.de)

### Lauschkütte climbing forest

In 2007 we erected this climbing forest at a beautiful tourist destination near Bingen. The portfolio is supplemented by the possibility of overnight accommodation in our ErlebNest in this forest.  
[www.kletterwald-lauschkutte.de](http://www.kletterwald-lauschkutte.de)

### Climbing forest Blomberg

We built Bavaria's highest climbing forest at Bad Tölz in the summer of 2008.  
[www.kletterwald-blomberg.de](http://www.kletterwald-blomberg.de)

### Climbing forest Marburg

The Marburg climbing forest opened its gates punctually for the start of the 2011 season.  
[www.kletterwald-marburg.de](http://www.kletterwald-marburg.de)

## Kletterwald Bad Marienberg

Im Frühjahr 2012 eröffnete der Kletterwald Bad Marienberg in einem schönen Mischwald an einem grossen Tierpark mit Kinderspielplatz.  
[www.kletterwald-badmarienberg.de](http://www.kletterwald-badmarienberg.de)

## Skytrek Sterzing

Direkt an der Ferienroute vor dem Brennerpass wurde die Anlage komplett als Bausatz in Kundeneigenleistung errichtet.  
[www.skytrek.it](http://www.skytrek.it)

## Estermann Event Abenteuer GmbH

### Munich forest

A very successful facility, established in 2015, with 100 elements, a continuous Belay System, complete performance, including tree care.  
[www.muenchner-wald.de](http://www.muenchner-wald.de)

### Climbing forest Chiemsee

This climbing forest came into being directly at the bank of Lake Chiemsee in Prien in the autumn of 2008.  
[www.kletterwald-prien.de](http://www.kletterwald-prien.de)

## Rope course Gründenmoos in Switzerland

A rope course with 5 courses opened directly opposite the sport facility Gründenmoos in June 2012, providing a team and a children's course.  
[www.gruendenmoos.ch/seilpark](http://www.gruendenmoos.ch/seilpark)

## Zipline in the Sokcho resort in South Korea

In the spring of 2016, in cooperation with our Korean sales partner, we erected two 150 m long ropeways in the Hanwah resort in Seorak with a zip-stop system across a lake.

## Treewalk in Rotorua / Neuseeland

In the autumn of 2015, we built a Tree-walk in the Redwoods in New-Zealand. This new development of suspension bridges in living trees runs across a length of 660m with 23 bridges at a height of 8 - 10 metres. A unique project that we developed and realised with an international team.

Cambium – We bring people into nature

# Cambium

**The trees are our most important construction element. Everything else is harmoniously added on.**

We have been developing and building adventure parks, tree houses and playgrounds in forests since 2006. As entrepreneurs, working with and in the forest, we consider ourselves responsible for it. We plan and build in an environmentally-friendly manner. Not only for ecological reasons; economic sustainability is important for us. We are convinced that both foster each other.

Cambium is the tree's vital line. The growth layer, which is found underneath the bark, is to be sustained.

**From conception to equipping with building sets, right up to turnkey constructions: we offer individual solutions for every demand – creative and different. Get in touch with us.**

*That we are not only extremely practical but also develop creative and innovative solutions, was confirmed by the IAPA Award for the products Treewalk, ErlebNest and the SafeFox Guest monitoring system.*

## Cambium GmbH

### Climbing forest shop

Europe's unique full-range supplier for adventure park products

#### Cambium GmbH

Plans, builds and supervises adventure parks and rope courses

#### Kids

Low altitude courses for children and playgrounds

### Tree houses

For the special forest canopy experience

#### Treewalk

Experience new perspectives walking through the treetops
