

We bring people into nature

KIDS

Low altitude courses for children
and playgrounds

The forest adventure for tightrope walkers and climbing artists

We build playgrounds and courses in an adventure park style. Children from the age of three up to young adults will have fun and be able to enjoy a climbing challenge.

What makes our playgrounds special:

As in an adventure park, the playing equipment gets installed between the trees. However, due to the low altitude there is no need to belay the children. But don't get tricked: when standing on the forest floor, it appears that the individual stages are easily mastered. However, whoever sets off on the course toward seemingly uprightly balanced stakes in the air or footsteps that are affixed to chains, quickly notices: walking at a high speed across the obstacles is not going to work; everything is way too wobbly for this. A sense of balance is necessary, and hands and feet need to be coordinated.

Adventure and plenty of fun for all children, both big and small.

For the love of nature ...

Since our main construction material is wood, our products are harmoniously integrated in the natural forest surroundings. Our unique sling technology allows us to affix the playing equipment to the trees without any screws.

Playgrounds and courses ...

- are suited for younger and older children.
- offer both, a climbing adventure and the opportunity to experience nature.
- can be used year-round.

What characterises us

- We use highly weatherproof woods such as larch and robinia as well as high-quality steel ropes.
- Thanks to tree assembly techniques that grow with the trees, our courses require less maintenance and are gentle on the trees.
- Our installations/products are sophisticated down to the smallest components and constantly optimised for practical use during the daily operation of already existing facilities.

Prerequisites for playgrounds and courses

- Near-natural areas, ideally with a tree population
- Trees with a diameter starting from 30 cm

Cambium

The trees are our most important construction element. Everything else is harmoniously added on.

We have been developing and building adventure parks, tree houses and playgrounds in forests since 2006. As entrepreneurs, working with and in the forest, we consider ourselves responsible for it. We plan and build in an environmentally-friendly manner. Not only for ecological reasons; economic sustainability is important for us. We are convinced that both foster each other.

From conception to equipping with building sets, right up to turnkey constructions: we offer individual solutions for every demand – creative and different. Get in touch with us.
